5 pages have low text-HTML ratio

About this issue: Your text to HTML ratio indicates the amount of actual text you have on your webpage compared to the amount of code. This issue is triggered when your text to HTML is 10% or less. Search engines have begun focusing on pages that contain more content. That's why a higher text to HTML ratio means your page has a better chance of getting a good position in search results. Less code increases your page's load speed and also helps your rankings. It also helps search engine robots crawl your website faster. How to fix: Split your webpage's text content and code into separate files and compare their size. If the size of your code file exceeds the size of the text file, review your page's HTML code and consider optimizing its structure and removing embedded scripts and styles.

50

2 pages have a low word count

About this issue: This issue is triggered if the number of words on your webpage is less than 200. The amount of text placed on your webpage is a quality signal to search engines. Search engines prefer to provide as much information to users as possible, so pages with longer content tend to be placed higher in search results, as opposed to those with lower word counts. For more information, please view this video: <https://www.youtube.com/watch?v=w3-obcXkyA4>. How to fix: Improve your on-page content and be sure to include more than 200 meaningful words.

20

0 external links are broken

00

0 external images are broken

00

0 links on HTTPS pages leads to HTTP page

00

0 pages don't have enough text within the title tags

00

68 0

31 links to external pages or resources returned a 403 HTTP status code

About this issue: This issue is triggered if a crawler gets a 403 code when trying to access an external webpage or resource via a link on your site. A 403 HTTP status code is returned if a user is not allowed to access the resource for some reason. In the case of crawlers, this usually means that a crawler is being blocked from accessing content at the server level. How to fix: Check that the page is available to browsers and search engines. To do this, follow a link in your browser and check the Google Search Console data. 1. If a page or resource is not available, contact the owner of the external website to restore deleted content or change the link on your page. 2. If a page is available but our bot is blocked from accessing it, you can ask the external website owner to unblock the page, so we can check all resources correctly. You can also hide this issue from your list.

31 0

30 pages have more than one H1 tag

About this issue: Although multiple `<h1>` tags are allowed in HTML5, we still do not recommend that you use more than one `<h1>` tag per page. Including multiple `<h1>` tags may confuse users. How to fix: Use multiple `<h2>`-`<h6>` tags instead of an `<h1>`.

30 0

3 orphaned pages in sitemaps

About this issue: An orphaned page is a webpage that is not linked to internally. Including orphaned pages in your sitemap.xml files is considered to be a bad practice, as these pages will be crawled by search engines. Crawling outdated orphaned pages will waste your crawl budget. If an orphaned page in your sitemap.xml file has valuable content, we recommend that you link to it internally. How to fix: Review all orphaned pages in your sitemap.xml files and do either of the following: If a page is no longer needed, remove it; If a page has valuable content and brings traffic to your website, link to it from another page on your website; If a page serves a specific need and requires no internal linking, leave it as is.

3 0

2 subdomains don't support HSTS

About this issue: HTTP Strict Transport Security (HSTS) informs web browsers that they can communicate with servers only through HTTPS connections. So, to ensure that you don't serve unsecured content to your audience, we recommend that you implement HSTS support. How to fix: Use a server that supports HSTS.

2 0

2 pages have only one incoming internal link

About this issue: Having very few incoming internal links means very few visits, or even none, and fewer chances of placing in search results. It is a good practice to add more incoming internal links to pages with useful content. That way, you can rest assured that users and search engines will never miss them. How to fix: Add more incoming internal links to pages with important content.

2 0

0 pages are blocked from crawling

0 0

0 page URLs are longer than 200 characters

0 0

0 outgoing external links contain nofollow attributes

0 0

Robots.txt not found	0
0 pages have hreflang language mismatch issues	0
0 orphaned pages in Google Analytics	0
0 pages take more than 1 second to become interactive	0
0 pages blocked by X-Robots-Tag: noindex HTTP header	0
0 issues with blocked external resources in robots.txt	0
0 issues with broken external JavaScript and CSS files	0
0 pages need more than 3 clicks to be reached	0
0 URLs with a permanent redirect	0
0 resources are formatted as page link	0
0 links on this page have no anchor text	0
0 links on this page have non-descriptive anchor text	0

Low text to HTML ratio

i About this issue: Your text to HTML ratio indicates the amount of actual text you have on your webpage compared to the amount of code. This issue is triggered when your text to HTML is 10% or less. Search engines have begun focusing on pages that contain more content. That's why a higher text to HTML ratio means your page has a better chance of getting a good position in search results. Less code increases your page's load speed and also helps your rankings. It also helps search engine robots crawl your website faster. How to fix: Split your webpage's text content and code into separate files and compare their size. If the size of your code file exceeds the size of the text file, review your page's HTML code and consider optimizing its structure and removing embedded scripts and styles.
