## 2 issues with duplicate title tags

About this issue: Our crawler reports pages that have duplicate title tags only if they are exact matches. Duplicate <title> tags make it difficult for search engines to determine which of a website's pages is relevant for a specific search query, and which one should be prioritized in search results. Pages with duplicate titles have a lower chance of ranking well and are at risk of being banned. Moreover, identical <title> tags confuse users as to which webpage they should follow. How to fix: Provide a unique and concise title for each of your pages that contains your most important keywords. For information on how to create effective titles, please see this Google article: <https://support.google.com/webmasters/answer/35624>

---

0 structured data items are invalid **0**

---

0 pages have slow load speed **0**

28 0**28 pages have low text-HTML ratio**

About this issue: Your text to HTML ratio indicates the amount of actual text you have on your webpage compared to the amount of code. This issue is triggered when your text to HTML is 10% or less. Search engines have begun focusing on pages that contain more content. That's why a higher text to HTML ratio means your page has a better chance of getting a good position in search results. Less code increases your page's load speed and also helps your rankings. It also helps search engine robots crawl your website faster. How to fix: Split your webpage's text content and code into separate files and compare their size. If the size of your code file exceeds the size of the text file, review your page's HTML code and consider optimizing its structure and removing embedded scripts and styles.

28 0

0

---

0 issues with unminified JavaScript and CSS files

0

---

0 link URLs are too long

0

29 0**26 links on this page have no anchor text**

About this issue: This issue is triggered if a link (either external or internal) on your website has an empty or naked anchor (i.e., anchor that uses a raw URL), or anchor text only contains symbols. Although a missing anchor doesn't prevent users and crawlers from following a link, it makes it difficult to understand what the page you're linking to is about. Also, Google considers anchor text when indexing a page. So, a missing anchor represents a lost opportunity to optimize the performance of the linked-to page in search results. How to fix: Use anchor text for your links where it is necessary. The link text must give users and search engines at least a basic idea of what the target page is about. Also, use short but descriptive text. For more information, please see the "Use link wisely" section in Google's SEO Starter Guide [https://support.google.com/webmasters/answer/7451184?hl=en&ref\\_topic=9460495&authuser=0](https://support.google.com/webmasters/answer/7451184?hl=en&ref_topic=9460495&authuser=0)

26 0**2 subdomains don't support HSTS**

About this issue: HTTP Strict Transport Security (HSTS) informs web browsers that they can communicate with servers only through HTTPS connections. So, to ensure that you don't serve unsecured content to your audience, we recommend that you implement HSTS support. How to fix: Use a server that supports HSTS.

2 0**1 orphaned page in sitemaps**

About this issue: An orphaned page is a webpage that is not linked to internally. Including orphaned pages in your sitemap.xml files is considered to be a bad practice, as these pages will be crawled by search engines. Crawling outdated orphaned pages will waste your crawl budget. If an orphaned page in your sitemap.xml file has valuable content, we recommend that you link to it internally. How to fix: Review all orphaned pages in your sitemap.xml files and do either of the following: If a page is no longer needed, remove it; If a page has valuable content and brings traffic to your website, link to it from another page on your website; If a page serves a specific need and requires no internal linking, leave it as is.

1 0

0 pages have more than one H1 tag

0 0

0 pages are blocked from crawling

0 0

0 page URLs are longer than 200 characters

0 0

0 outgoing external links contain nofollow attributes

0 0

Robots.txt not found

0 0

0 pages have hreflang language mismatch issues

0 0

0 orphaned pages in Google Analytics	0
0 pages take more than 1 second to become interactive	0
0 pages blocked by X-Robots-Tag: noindex HTTP header	0
0 issues with blocked external resources in robots.txt	0
0 issues with broken external JavaScript and CSS files	0
0 pages need more than 3 clicks to be reached	0
0 pages have only one incoming internal link	0
0 URLs with a permanent redirect	0
0 resources are formatted as page link	0
0 links on this page have non-descriptive anchor text	0
0 links to external pages or resources returned a 403 HTTP status code	0

## Duplicate title tags

**i** About this issue: Our crawler reports pages that have duplicate title tags only if they are exact matches. Duplicate <title> tags make it difficult for search engines to determine which of a website's pages is relevant for a specific search query, and which one should be prioritized in search results. Pages with duplicate titles have a lower chance of ranking well and are at risk of being banned. Moreover, identical <title> tags confuse users as to which webpage they should follow. How to fix: Provide a unique and concise title for each of your pages that contains your most important keywords. For information on how to create effective titles, please see this Google article: <https://support.google.com/webmasters/answer/35624>

## No HSTS support

**i** About this issue: HTTP Strict Transport Security (HSTS) informs web browsers that they can communicate with servers only through HTTPS connections. So, to ensure that you don't serve unsecured content to your audience, we recommend that you implement HSTS support. How to fix: Use a server that supports HSTS.

## Historical chart for audits

Period: February 1, 2021 (16:25) - February 1, 2021 (16:25)

## No HSTS support 2

## Orphaned sitemap pages

**i** *About this issue: An orphaned page is a webpage that is not linked to internally. Including orphaned pages in your sitemap.xml files is considered to be a bad practice, as these pages will be crawled by search engines. Crawling outdated orphaned pages will waste your crawl budget. If an orphaned page in your sitemap.xml file has valuable content, we recommend that you link to it internally. How to fix: Review all orphaned pages in your sitemap.xml files and do either of the following: If a page is no longer needed, remove it; If a page has valuable content and brings traffic to your website, link to it from another page on your website; If a page serves a specific need and requires no internal linking, leave it as is.*
